THE SYBR-AER ONSITE WASTEWATER TREATMENT SYSTEM

CONGRATULATIONS! You are the owner of a complete wastewater treatment system that combines aeration and solids separation in one compact unit. Your system is tested and certified under NSF, International, ANSI/NSF Standard 40, as a Class I system. The SYBR-AER system meets the needs for onsite wastewater treatment beyond the capabilities of septic tanks. Like all onsite wastewater treatment alternatives, your SYBR-AER unit must be operated and maintained in accordance with the Manufacturer’s requirements and service provider’s instructions. When properly operated and maintained, your unit will produce an effluent that meets all certification requirements.

HOW DOES THE SYBR-AER OPERATE?

One of the features of the SYBR-AER is that the entire treatment process takes place within a single tank. Wastewater flows into the tank. A regenerative blower blows air to diffusers that disperses the air. This process transfers oxygen throughout the system. The oxygen, which is dissolved in the water, provides an environment conducive to the growth of aerobic bacteria. These bacteria effectively consume the organic materials. After 20 hours of aeration the blower shuts off and the system goes into a 3 hour settling cycle, after the 3 hour settling cycle the discharge pump comes on and pumps the treated effluent out of the tank. One hour after the start of the pump out cycle, a new aeration cycle begins. The entire process is repeated every 24 hours.

IMPORTANT ITEMS TO REMEMBER

SYBR-AER units have an initial break-in period of four to six weeks, during which time bacteria establish themselves in the unit. The development of these biological colonies occur naturally with the addition of sanitary wastes, so we recommend you use all your plumbing facilities in a normal manner from initial start-up. You may notice a tendency for the unit to foam from laundry wastes during this period. This is normal, and it should cease by the sixth week. You can help by using moderate amounts of low-sudsing biodegradable detergents. Break-in can be accelerated by “seeding,” which is a process by which microbial growth is introduced from another SYBR-AER unit.

SYBR-AER units are designed to treat typical domestic wastewater. Flows from the materials in garage catch basins, storm water drains, sumps, and the like will adversely affect SYBR-AER operation. Excessive amounts of cleaners, solvents, paints, greases, etc., will lead to a failure and require service from a trained SYBR-AER representative.

Following these simple rules will decrease or eliminate maintenance problems and prolong the life and efficiency of your unit.

- Obtain and maintain a service agreement with an authorized SYBR-AER service provider.
- Check that your unit’s access lids are securely tightened down.
- Check the alarm by pressing the button to activate the light and buzzer on the audio-visual alarm.
- Keep surface water from ponding around the unit.
- Call your service provider at the first sign of trouble.
Follow your service provider’s advice. He/she is trained to ensure that your unit operates at its maximum efficiency.

- Use low-sudsing, low phosphate biodegradable detergents.
- Contact your service provider if the system is to be used intermittently or if extended periods of non-use is anticipated.
- Keep non-biodegradable items out of your system. These items include, but are not limited to: wet strength paper towels, disposable baby diapers, sanitary napkins, rubber and plastic products, rags, grit, and coffee grounds.
- Avoid placing grease into your system. Excessive grease may impede normal operation.
- Do not pour solvents, paints, etc., into your system. These substances will harm the bacteria.
- Do not service the unit yourself. Contact your service provider to maintain your SYBR-AER unit.

**ALARM SYSTEM and ALARM CONDITION**

Every SYBR-AER unit comes equipped with an audio-visual alarm system. This alarm should be mounted in a conspicuous location. If an abnormal condition develops, a light and buzzer will notify you. Silence the buzzer by pressing the "silence" button on the alarm. If the light should stay on, call your service provider.

Check your audio-visual alarm periodically by holding the “test” button for approximately 10-to-12 seconds or until the light flashes and the buzzer sounds. Contact your service provider if your “test” button fails to activate the alarm.

If your alarm goes off, there are several steps you can take to determine the possible nature of the malfunction.

1. If the alarm is activated between 5:00a.m. and 12:00p.m. Look at the alarm, if the alarm light is on solid [not flashing] the problem is blower related.
2. If the alarm activated intermittently while washing clothes or taking a shower? And the alarm light is flashing, high water may exist in the system.
MAINTENANCE PROGRAM

YOUR SYBR-AER UNIT REQUIRES PERIODIC SERVICING.

Maintenance of your SYBR-AER is essential to ensure its proper operation and longevity.

During your initial two-year warranty, an authorized service representative will inspect your unit at six-month intervals and make any necessary adjustments to it at no cost to you. The only exception is for the replacement of “out of warranty” and “physically abused” parts or abuse to the treatment process. Moreover, this warranty will not cover other associated devices for pre-treatment, disinfection, or dispersal.

For continued service, your service provider will offer an annual service contract at the end of the warranty. Please contact your service provider for details.

In the event a problem arises or service is required, refer to the unit’s data plate (located on the alarm and access lid) or the service label for instructions on contacting your closest service provider. Occasional pumping is required due to accumulation of solids. The pumping cost may not be covered under your maintenance and service program. If you need parts or service, please contact the factory for the name of the service provider nearest you.

Your SYBR-AER system is designed and intended to treat typical domestic wastewater (i.e., human bodily waste and liquid waste generated by the occupants of dwellings). To insure optimum performance and longevity, do not discharge any type of non-residential wastewater or other high-strength waste, including commercial food service waste, without contacting the manufacturer to determine if this will be acceptable without additional treatment.

IMPORTANT: SYBR-AER units must be installed and maintained in compliance with all state and local laws and regulations. This includes compliance with all regulations concerning proper effluent disposal and the pumping and disposal of solids and byproducts pumped from the unit.

SYBR-AER WARRANTY DOES NOT COVER THE COST OF SERVICE CALLS, LABOR, OR MATERIALS REQUIRED DUE TO THE FOLLOWING:

Misuse, abuse, or any repair or alteration performed by anyone other than authorized SYBR-AER service provider.

1. Misuse, abuse, or any repair or alteration performed by anyone other than authorized SYBR-AER service provider

2. Use of components other than authorized SYBR-AER replacement components.

3. Non-wastewater flows caused by infiltration, storm water connections, leakage from improperly maintained plumbing fixtures, water softener backwash, etc.
4. Failure to maintain electrical power to the treatment system in accordance with the requirements of the Manufacturer or the authorized SYBR-AER service provider.

5. Disposal into the SYBR-AER of non-biodegradable materials (i.e., plastics, coffee grounds, etc.) chemicals, solvents, grease, oil, paint, or any other substance, including but not limited to medicines, metals, toxins, volatile substances, and the like that are deleterious to the development and maintenance of the biological treatment process.

6. Short-term or daily wastewater flows to the SYBR-AER that exceeds the unit’s hydraulic or organic design capabilities.

7. Any usage contrary to SYBR-AER owner’s manual and/or the SYBR-AER representative’s recommendations.

8. Locally secured concrete tanks that do not meet SBR Wastewater Technologies Inc. specifications.

WARRANTY

SBR Wastewater Technologies Inc., warrants the parts in each aerobic treatment unit to be free from defects in material and workmanship for a period of two (2) years from date of installation for treatment of household wastewater when properly registered with the manufacturer. SBR Wastewater Technologies Inc., sole obligation under this warranty is as follows: SBR Wastewater Technologies Inc. shall fulfill this warranty by repairing or exchanging any component part, FOB Factory, that shows evidence of defects, provided said component part has been paid for and is returned through an authorized dealer, transportation prepaid. The warrantee must also notify SBR Wastewater Technologies Inc., of the defect complained of. There is no informal dispute settlement mechanism available under this LIMITED WARRANTY.

No warranty is made as to the field performance of any unit. This LIMITED WARRANTY applies only to the parts manufactured by SBR Wastewater Technologies Inc., and does not include any portion of the household plumbing, drainage, or installation of disposal system. Components or accessories supplied by SBR Wastewater Technologies Inc., but manufactured by others, are warranted only to the extent of and by the terms and conditions of the original manufacturer's warranty. In no event shall SBR Wastewater Technologies Inc., be responsible for delay or damages of any kind or character resulting from, or caused directly or indirectly by, defective components or materials manufactured by others.

Recommendations for special applications will be based on the best available experience of SBR Wastewater Technologies Inc., and published industry information. Such recommendations do not constitute a warranty of satisfactory performance.

This LIMITED WARRANTY extends to the consumer of the product. As used herein, "consumer" is defined as the purchaser who first uses the unit or the subsequent user[s] for the 2 years after its initial installation. It is the first user's or servicing dealer's obligation to make known to the subsequent user[s] the terms and conditions of this warranty.

This warranty is a LIMITED WARRANTY and no claim of any nature shall be made against SBR Wastewater Technologies Inc., unless and until the consumer, or his legal representative, notifies SBR Wastewater Technologies Inc., in writing of the defect complained of and delivers the product and/or defective part[s], freight prepaid, to the factory or an authorized service station.

SBR Wastewater Technologies Inc., reserves the right to revise, change, or modify the construction and design of the aerobic treatment units for household wastewater, or any component part or parts thereof, without incurring any obligation to make such changes or modifications in equipment previously sold. SBR Wastewater Technologies Inc., also reserves the right, in making replacements of component parts under this warranty, to furnish a component part which, in its judgment, is equivalent to the part replaced.

UNDER NO CIRCUMSTANCES WILL SBR WASTEWATER TECHNOLOGIES INC., BE RESPONSIBLE TO THE WARRANTEE FOR ANY OTHER INCIDENTAL OR CONSEQUENTIAL DAMAGES, INCLUDING BUT NOT LIMITED TO LOST PROFITS, LOST INCOME, LABOR CHANGES, DELAYS IN PRODUCTION AND/OR IDLE PRODUCTION, WHICH DAMAGES ARE CAUSED BY A DEFECT IN MATERIAL AND/OR WORKMANSHIP IN ITS PRODUCT OR PARTS. SOME STATES DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES SO THE ABOVE LIMITATION OR EXCLUSION MAY NOT APPLY TO YOU.

This warranty is expressly in lieu of any other express or implied warranty, including any warranty of merchantability or fitness, and of any other obligation on the part of SBR WASTEWATER TECHNOLOGIES INC. SOME STATES DO NOT ALLOW LIMITATIONS ON HOW LONG AN IMPLIED WARRANTY LASTS, SO THE ABOVE LIMITATION MAY NOT APPLY TO YOU. THIS WARRANTY GIVES YOU SPECIAL LEGAL RIGHTS AND YOU MAY HAVE OTHER RIGHTS, WHICH VARY FROM STATE TO STATE.
